Alexandria, VA 22313-1450

**RULE 132 DECLARATION OF PETER A. CHAPMAN**

I, Peter A. Chapman, declare that:

1. I am Executive Vice President for Maverick Industries, Inc. ("Maverick"). I have held this position since 1997. Prior to that, from 1982 through 1997, I was National Sales Manager.

2. I hold a Bachelor's of Science Degree in Marketing from Central Connecticut State University.

3. I have been involved in the consumer houseware business since 1976, first at Gant Industries and then at Newell-Rubbermaid.

4. I am intimately familiar with the design and development of Maverick's wireless meat thermometers, including its first generation product - the REDI CHEK. Indeed, I am a co-inventor of the wireless meat thermometer

system claimed and described in the present application and initially conceived the idea to develop such a system.

5. In addition to designing the REDI-CHEK meat thermometer, I have been responsible for its sale nationally and in first bringing the product to market.

6. Maverick was the first company to introduce a wireless meat thermometer system to the market. Such units were first sold by Maverick in 2000. (See Exhibit 1.)

7. Indeed, by November, 2001, Maverick had sold over 50,000 units as is indicated in Exhibits 1 and 2.

8. In fact, by November, 2001, Maverick's REDI-CHEK wireless meat thermometer system had gained considerable fame within the cooking houseware community to the point where it was the subject of an article in The New York Times. (See Exhibit 3.)

9. The unit that is shown in The New York Times Article is covered by the claims of the present application. Indeed, Maverick continues to sell such a wireless meat thermometer system to this day. (See Exhibit 4.)

10. In that regard, since its initial introduction on 2000 Maverick had sold over 750,000 units as is indicated in Exhibits 1, 2, 4 and 5. Prior to the introduction of wireless meat thermometer systems by Maverick, no such systems existed on the market.

11. Since that time however, several of Maverick's competitors have introduced competing products that are covered by the claims of the present application. (See Exhibits 6, 7, 8, 9, and 10.)

12. Significantly, the sales of such wireless thermometer systems have grown even in the presence of competing prior art meat thermometers including, for

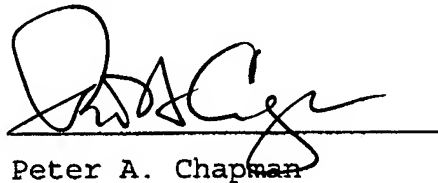

example, the thermometers of Tymkewicz, Archard, and Chung.  
(See Exhibit 7, page 2.)

13. Indeed, the sale of wireless meat thermometers by Maverick is the number one dollar volume seller its thermometer business.

14. Maverick's wireless meat thermometer continues to enjoy a substantial share of the market, including in general the meat thermometer market.

I declare under penalty of perjury that, to the best of my knowledge, the foregoing is true and correct. I further state that I have been warned that willful false statements and the like may be punishable by fine or imprisonment, or both, under §1001 of title 18 of the United States code and such willful false statements may jeopardize the validity of the application or any patent resulting therefrom. I state that all statements made of my own knowledge are true and all statements made on information and belief are believed to be true.

Dated: Oct 22, 2007

  
Peter A. Chapman

## HOW IT WORKS

## A Thermometer That Squawks When the Bird Is Done

By SUSAN STELLIN

ONE of the more stress-inducing traditions associated with Thanksgiving, particularly for first-time hosts, is cooking the turkey. Theoretically, cooking a turkey is on the low end of the culinary difficulty scale: you wash it, you stuff it, you cover it with butter or oil and you stick it in the oven, basting occasionally.

It's getting the turkey out of the oven — or rather, knowing when to take it out of the oven — that presents the challenge. Less sophisticated chefs might recite some formula to determine when the bird is done: say, cook it 15 to 20 minutes per pound.

But those who frequent the aisles of kitchen supply stores or worry about food-borne bacteria know that the temperature of the turkey really determines when it is ready to eat. As the Betty Crocker cookbook advises, "There is no substitute for a meat thermometer for determining the doneness of a turkey."

But the Betty Crocker people probably did not envision the range of meat thermometers that would emerge as technology made its way into the kitchen. The old oven-safe mercury and dial thermometers now face competition from digital meat thermom-

eters with electronic displays that are a far cry from the oven-door vigils and plastic pop-up timers of old.

The digital thermometers come in both the "instant read" variety, involving a metal probe meant to be used for a quick temperature check but not left in the oven, and another type that allows the probe to be left in the bird while it cooks.

In the latter case, the probe is connected by a wire to a device that sits on the counter, displaying the temperature of the meat. The unit can be programmed to beep when a certain temperature is reached.

But for truly gadget-minded chefs, some companies sell digital meat thermometers that include a wireless receiver, so multitasking cooks don't have to abandon the football game on television to check on the turkey. With these devices, available from housewares manufacturers like Maverick Industries and Nu-Temp, the metal probe inserted into the meat is wired to a transmitter outside the oven or grill.

The transmitter monitors the temperature of the meat and sends that number to a receiver via a radio frequency. "The transmitter, which is attached to the probe, sends a signal every once in a while to the receiver," said Darren Keller, operations manager for Maverick Industries, which makes a version called the Redi-Chek Remote. "The receiver then displays what it is receiving."

Mr. Keller said that the Redi-Chek unit worked within a range of 100 feet if used outdoors, say, for checking the temperature of meat on the grill. Inside, he said, "you won't get 100 feet distance through walls — it gets cut back a little bit."

Unlike mercury thermometers, which measure temperature as the heated liquid expands, most digital thermometers used in a kitchen rely on what is called a thermistor to gauge the temperature of food. Louis A. Bloomfield, a professor of physics at the University of Virginia who teaches a course called How Things Work, said that a thermistor consists of two wires that connect to a small semiconductor that could be the size of a sesame seed.

Digital thermometers are generally battery-operated. A small current is sent down one wire, passes through the semiconductor and comes back through the other wire. "The thermistor as it gets hotter will become a better conductor of electricity, and will extract less energy from each charge as it passes," Professor Bloomfield said. "If it loses only a little voltage, the thermistor is hot. If it loses a lot, it's cold." A microchip relates the voltage drop to data programmed by the manufacturer that indicates how that voltage correlates to temperature.

So what temperature indicates that a turkey is ready to eat? That is a point of contention, even among the most serious chefs. Sherleen Clausen, a

culinary specialist with Butterball, a leading turkey distributor, recommends 170 degrees Fahrenheit for the breast and 180 for the thigh. "Those are what we refer to as doneness temperatures," she said. "They've really gone beyond the minimum for safety." Many chefs and cookbook authors recommend a slightly lower temperature for a moister bird.

The United States Department of Agriculture's Food Safety and Inspection Service recommends cooking a whole turkey until it reaches 180 degrees, which is hot enough to destroy harmful bacteria like salmonella and E. coli. If the bird is stuffed, the stuffing temperature should be measured separately and reach 165 degrees.

Ms. Clausen trains the staff that answers Butterball's Turkey Talk-Line (800-288-8372), which takes questions in November and December. She said that questions about how to use a meat thermometer were the fourth most common inquiry.

Even as technology has changed everything from ovens and meat thermometers to how turkeys are raised, Ms. Clausen said, callers' questions about cooking a holiday turkey have remained pretty much the same.

There has been one development though. Since 1995 Butterball has had a Web site ([www.butterball.com](http://www.butterball.com)), and this year, perplexed cooks can even ask questions online.

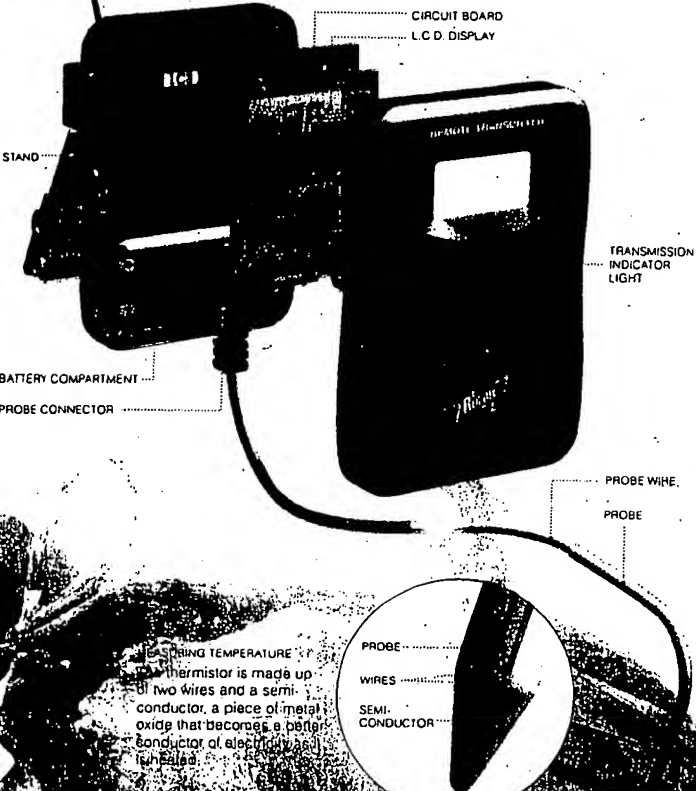

## Holiday Roasting, Remotely

The devices use a metal probe to measure temperature, an oven-top transmitter and a receiver that can be carried away from the kitchen.

## IN THE KITCHEN

## SENDING DATA

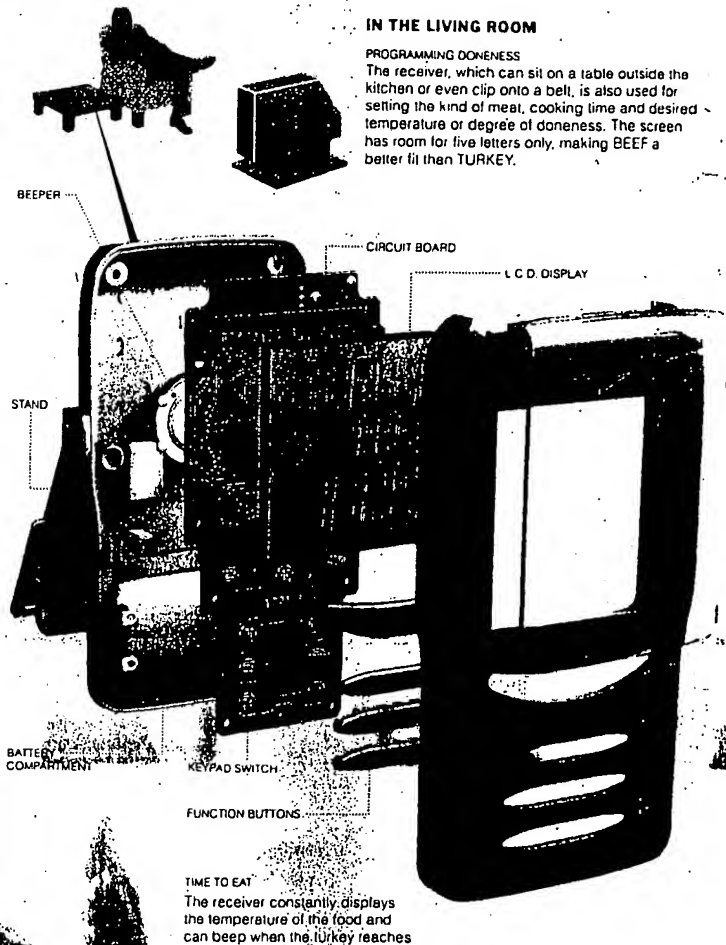

A microchip in the transmitter calculates temperature by comparing data from a device known as a thermistor with a table of data developed by the manufacturer. The transmitter sends that information to the receiver via radio frequency.

## IN THE LIVING ROOM

## PROGRAMMING DONESS

The receiver, which can sit on a table outside the kitchen or even clip onto a belt, is also used for setting the kind of meat, cooking time and desired temperature or degree of doneness. The screen has room for five letters only, making BEEF a better fit than TURKEY.

Brookstone sku # 558783

[Write a Review](#) | [Read 10 Reviews](#)

**Awarded five stars by Good Housekeeping Magazine.**

**Enjoy carefree cooking with our wireless remote cooking thermometer.**

Grilling on the BBQ is a great way to entertain. Constantly standing next to the grill, however, is not. Now you can have the freedom to mingle with our remote meat thermometer for BBQ. A voice prompt alerts you when your entrée is "Almost Ready" and "Ready." It's one of the hottest BBQ gifts you can give!

**A remote meat thermometer for BBQ takes the guesswork out of grilling.**

Insert the stainless steel probes in the center of the meat. Select the type of meat and how you would like it done. And let our wireless remote cooking thermometer do the rest while you entertain guests... or simply relax knowing that you will not overcook your food!

**Brookstone BBQ gifts sizzle with innovation.**

- Remote meat thermometer for BBQ works from up to 300 feet away.
- Belt clip for added freedom.
- Display backlight for convenient night grilling.
- Water resistant for easy cleanup.
- Wireless remote cooking thermometer operates at 433Mhz.
- Uses two AA batteries and two AAA batteries (not included).

**Looking for tasteful BBQ gifts? Grill Alert is a prime choice.**

Cook to perfection and never worry about overcooking again! Any chef could use a wireless remote cooking thermometer. They make great BBQ gifts! Order today!

#### Step away from the grill

The wireless transmitter sends temperature readings to the monitor up to 300' away. Just insert the stainless steel probe into the center of the meat, select the type of meat (Beef, Lamb, Veal, Hamburger, Pork, Turkey, Chicken or Fish) and choose how you want it cooked (Rare, Medium Rare, Medium or Well Done). Clip the receiver to your belt, get away from the grill and socialize with guests or work in the yard while your dinner is cooking.

#### Voice tells you when food is done

#### "Your entrée is ready"

Display shows target and current cooking temperatures while the bar graph tracks your cooking progress. Cook food to perfection every time and never worry about overcooking; the voice prompts alert you when your entrée is "Almost ready" and "Ready." The display has a backlight, so you can grill well into the evening. Water-resistant design makes cleanup a snap. Great for use inside with your oven or stovetop, as well as outdoors on the grill.

Product Description

Amazon.com Review

Taylor's innovative remote thermometer lets the home chef monitor cooking without being tied to the kitchen. A durable transmitter and accompanying pager work in tandem to ensure meat is never overdone. To operate, insert the transmitter's 6-inch steel probe into the main course and place it in the oven. The probe's heat resistant chord travels from inside the oven, past a closed oven door, and connects to the transmitter sitting on a nearby countertop. Control settings can be set by type of meat or user-selected temperature. When ready, the transmitter sends a signal--reaching up to 120 feet--to trigger an audible alarm. If temperature monitoring is not needed, the versatile base unit can also function as a simple timer. Both transmitter and pager feature sturdy plastic construction and offer a clear digital number display. The transmitter requires one 9-volt battery while the pager runs with two AAAs--batteries not included with purchase. This product can be used when oven cooking or grilling and comes with a 1-year warranty. -- Amy Arnold

**What's in the Box** Transmitter, pager, 6-inch steel probe.

Product Description

Get paged when your meat is ready. Whether you've been cooking for years or just a beginner, this is the timer you have been waiting for! Simple operation and use allows you to insert the probe into the food, attach the thin wire to the transmitter outside of the oven and cook without worry. The pager alerts you once the optimum temperature and time is reached. Wireless Digital Meat Thermometer With Pager That Signals Up To 120' Insert The Stainless Steel Probe Into The Meat & Plug The Wire Into The Transmitter Pre-programmed For Meat & Taste Level Programmable Temperature Settings Shows Actual Temperature & The Desired Temperature Alarm Feature Lets You Know When Ready 24 Hour Dual Timer In Thermometer & Pager Temperature Range 14 To 392 Degrees. For a limited time, receive FREE GROUND SHIPPING.

★★★★★ Nice unit...and it works..., February 5, 2005

By [G. Litwinski "nopcbs"](#) (Midland, MI United States) - [See all my reviews](#)

REAL NAME™  
\*\*\*\*\*

### Most Recent Customer Reviews

★★★★★ Good but not perfect, not perfect by far.

I purchased this probe thermometer because I started getting into real barbecuing, I mean meat smoking. It works pretty good. [Read more](#)

...unlike the similar Weber POS.

I bought the Weber wireless remote thermometer from Anazon. I tried using it with next to no success. The base unit would not keep communicating with the remote unit, even when base and remote units were a foot apart. Forget about communication with the remote inside and the base unit at your grill outside. Sent it back to Amazon.

Bought this Taylor unit. Just got it and tried it. Communication is solid and the temperature displays (sender and remote) are accurate. (Kept me from over-cooking a niceribeye I was trying to cook rare.) No problem communicating with the grill outdoors and me inside...even with 32 F weather. The displays are plenty big.

Minus is that the plastic used in the construction of the two units does not seem real rugged or very high quality. The warranty is also only one year vs. the 10 years that Taylor gives on their wired unit.

It looks promising...and at least it does work, unlike the Weber.

★★★★★ **Ingenious and Functional**, September 6, 2005

By **J. Strachan** (East Coast, USA) - [See all my reviews](#)

REAL NAME™

Cook's Illustrated, a magazine that among other things extensively compares kitchen items and equipment wrote that this is the best remote meat thermometer, and I can't disagree. It is much more programmable and flexible than other makes. It works well in the oven, on the grill, in the smoker. I used it to cook a brisket for 12 hours when on vacation with my family. Having this device allowed me to leave the smoker and spend time with people instead of feeling like I had to be at the smoker to check progress all day long. The temperature seems to read accurately, the transmission range, although it may not be as long as the manufacturer states, is still very long, at least 70 feet while going through walls. I can't wait to use it for other items. Now I wish they made a remote oven

★★★★★ **Taylor Very Helpful!!**, May 31, 2006

By **Thornton Bryan "thorbob"** (tennessee, thar aint no place id rather be) - [See all my reviews](#)

.....  
REAL NAME™  
.....

My experience couldn't be more different than the previous buyer's. My thermometer and pager link flawlessly, alerting me continuously to temperature changes, and when the pager is out of range of the base. I bought this 10/05, and when the probe died a few weeks ago, I contacted Taylor, who responded quickly by email, alerting me of the LIFETIME warranty on the device. I shipped it back to them, and they ship me a new one. Original receipt and box NOT necessary. I have found the device very accurate, reliable, and useful. It has saved many a roast, steak, etc, as I am prone to starting cooking, and getting distracted by other projects. I am very pleased.
